

4WD On Road

This session is designed for drivers of 4WD capable vehicles which are occasionally used off road on unsealed tracks.

The course assesses and then provides for the risk level and development needs of each driver.

Vehicles with 4WD capability are becoming more prevalent. Due to their unique dynamics they offer both special capabilities and particular risks.

This course ensures that drivers are fully aware of their vehicle's capabilities and differences to standard cars/vans. How to safely operate them both on the public highway and in off road environments is covered.

Although many of these vehicles feel more 'car like' when driven, they do have special capabilities in some areas, whilst having reduced performance compared to standard cars in others. For example, if the road surface is slippery, the vehicle's grip will be limited by the adhesion of the tires to the road, regardless of any 4WD capability.

A focus of this program will also be managing the safe transition from the sealed highway to unmade tracks, or open country. Changes in the vehicle set up required and driving style, as well as observation approach, will be covered.

This course is **NOT** for drivers who use 4WD in extreme off road situations. Those drivers should be booked on the **4WD Off Road** course.

✓ Full Post Training Reports will be submitted with 48 hours of completion.

Key information:

Duration: Half day (3.5 Hours)

Trainer Delegate Ratio: 1-1

Location: Nationwide UK & Ireland

Reporting: Post Training Report

Specialist Equipment: 4WD Vehicle, client supplied

Road Type: Public Highway with access to private land with unmade tracks desirable

Licence Requirement: Full UK (EU), car

Objective: Unique behaviours required for 4WD capable vehicles both on sealed roads & tracks – with a focus on transition and unique risks of tracks and farmland /open country.
